

As the below named inventor, I hereby declare that my citizenship, residence postal address and residence are as stated below; that I verily believe myself to be the original, first and sole inventor of the invention entitled:

the specification of which is attached hereto and includes original U.S. Patent No. 5,245,736, issued September 21, 1993, and amendments thereto as required by 37 C.F.R. § 1.171 et seq.

I verily believe that the original U.S. Patent No. 5,245,736 is partly inoperative by reason of the fact that I claimed both more and less than I had a right to claim in the patent as specified hereinafter. In particular, Claims 1 and 16 were insufficient because they did not recite independent movement of the conveyors relative to the drive shaft. However, Claims 1 and 16 also contained unnecessary limitations in reciting that the at least two openings are provided for at least one of treating and handling at least one workpiece thereat, in reciting that the at least two conveyors are arranged at the transport device and in reciting that the transport arm for each conveyor projects from the drive shaft. In addition, Claim 1 also contains formal errors which are correctable by eliminating the colon in line 2, adding --and-- in the fifth line, changing "comprising" to --having-- in the sixth line, eliminating redundant language in the form of ", said transport device comprising" in the tenth and eleventh lines and substituting --and-- therefor, and inserting --drive-- between "said" and "shaft" in the fourteenth line. Likewise, Claim 16 contains formal errors which are correctable by deleting "said transport device further comprising" in the eighth line and adding --, and-- thereafter, eliminating redundant language in the form of ", said arms" and substituting --and-- therefor, and inserting --drive-- between "said" and "shaft" in the eleventh line. Claims 30 through 33 have been added to more comprehensively cover a combination of elements comprising the vacuum chamber. That is, Claim 30 defines at least two holders, at least two displacement drives and the relationship of the holders and displacement drives relative to a rotatable transport arrangement, Claim 31 defines an apparatus which do not require the displacement drives to be coupled to the transport arrangement but does require independently operable drives having a radial movement component. Claim 32 defines a linear drive for each of the conveyors, and Claim 33 defines a rotatable transport arrangement which carries one member for holding a workpiece, (and a sealed displacement drive between the transport mechanism and the member). Claim 34 has been added to define the novel and unobvious workpiece processing method described in the Specification in connection with a vacuum chamber and at least two independently movable conveyors.

I hereby claim the benefit under Title 35, United States Code, § 120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, §112, I acknowledge the duty to disclose material information as defined in Title 37, Code of Federal Regulations, § 1.56 (a) which occurred between the filing date of the prior application and the national or PCT international filing date of this application:
